Art Unit: 2883

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-31 and 46 , drawn to a method of making an optoelectronic circuit, classified in class 438, subclass 29.
- II. Claims 32-45, drawn to an optical integrated circuit, classified in class 385, subclass 14.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the optical integrated optoelectronic circuit can be made by another materially different process such as vapor deposition of layers, laser etching of layers, direct coating of layers, diffusion of dopants using thermal processes.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
